1. **Overview**
    a. *Primary Objective*: Get the player to book a meeting.
    b. The game will flow like an amusement park ride. It will take place in a meeting room, but each main button will open up a panel that takes the player along with Peter.
2. **Characters**
    a. Real Peter
        i. Role
            1. The main character.
            2. Delivers the necessary and business-related information.
        ii. Design
            1. Dressed in business attire.
            2. Face is clearly visible and syncs with the audio.
    b. Mini Peter
        i. Role
            1. Supporting character who plays the role of Real Peter's assistant. Acts as a tour guide who ushers the player along from scene to scene.
        ii. Design
            1. Small, round, cute. Can defy physics (e.g., jumping around the scene; sliding on logos)
    c. The possibility of other "main characters"
        i. If we do not want to confine the characters to Peter, the main character can differ depending on whose business card is scanned, for example. See Section 4.b.
    d. Interactions
        i. Real Peter and Mini Peter should mostly address the player, but should also exchange some banter to add charm.
3. **Core Gameplay**

a. Controls
    i. Player controls the game by touching clearly defined buttons on the screen.
    ii. Each button will take them to the relevant section.
b. Scenario (Corresponding storyboards are included. See Section 6.)
    i. The game begins on a title screen with a big green start button below the title text (storyboard_title_projectorScreen and storyboard_title_projectorScreen_v2).
    ii. Once started, the player is taken to the main stage/hub area.
    iii. Player is greeted by Real Peter with a formal introduction. He briefly introduces each section and points to its corresponding button (storyboard_mainStage_1 and storyboard_mainStage_v2).
    iv. Mini Peter enters the scene and receives an introduction from Real Peter.
    v. When the player presses a certain button, Mini Peter will take them along and take part in the transition screen effects (the transition is short). After the transition, Real Peter enters the scene and conveys the necessary information (storyboard_panel_1 and storyboard_panel_1_v2).
    vi. There is a scrolling preview of the web page on each panel with a link to the actual web page at the top in the form of a logo (refer to storyboard_panel_1_v2. The preview is a pre-rendered video/FMV (full-motion video https://en.wikipedia.org/wiki/Full-motion_video).
    vii. Once they have gone through their desired sections, they can book a meeting. To give as much freedom as possible, the “Book Meeting” button should always be visible and interactable. Same with the back button.
    viii. The general pace should be fast.
c. Progression

i. Treating this like an amusement park ride entails taking the player along for a ride. The AR experience should offer as little friction as possible.

ii. Each section visited can possibly include a business-related reward that will be applied when the player decides to book a meeting.

1. The rewards can be different, or one type of reward can compound on itself (The exact rewards are to be decided at the discretion of the relevant personnel).

4. UI and UX

a. Buttons

i. Contains the logo and design language that conveys its interactivity (e.g., bright color, beveled border, thicker outline).

ii. A big red back arrow at the top right/left corner of each section's pop-up should be clear and always visible.

iii. Each button brings up a new menu/window/scene containing the relevant information. It is overlaid atop the main stage. (e.g. Mini Peter pulls down a projector screen).

b. Quality of Life

i. Player should be able to return to the main stage/hub at any time.

ii. The "Book Meeting" button should always be visible in every section. It should be bigger in the hub and smaller within each section (preferably at the top or bottom of the scene window/menu).

c. Accessibility

i. A small mute button should be available in one of the corners of the screen at all times.

ii. All dialogue should be subtitled in a legible font, color, and outline at the bottom or top of the screen.

5. Technical

a. The reward mentioned in Section 3.c.ii will need to be tracked and associated with the player.
b. “Book Meeting” button takes the user to a landing page.
c. Other main characters will have to record themselves like Peter has. The “mini” character can have their face exchanged without creating a new model.
d. Unity Remote for testing https://docs.unity3d.com/6000.3/Documentation/Manual/UnityRemote5.html
e. The game can be hosted on Zoho Catalyst (if it works).
f. Alternatively, if Catalyst does not work: Blippar Web AR SDK Unity Integration https://docs.blippar.com/webar-sdk/integrations/unity-integration
    i. Installation instructions: https://docs.blippar.com/webar-sdk/integrations/unity-integration/package-installation
    ii. If prompted,
    “Unity found assemblies using deprecated Unity APIs in this project. Do you want the API Updater to update them? The following assemblies will be modified: Assets/webarSDK/Plugins/unitysdk.dll”
    Select “Yes”
    iii. License Key is found in BlippAR in “WebAR SDK”
    328c7f09-a659-4c32-8b5b-5ebea36bb21b

6. Storyboards

a. The part of the scenario corresponding to each specific storyboard is appended in Section 3.b.
b. The storyboard order is as follows: Title screen, Main stage, Panel.
c. Refer to the dialogue document for the corresponding animations.
